- ✓ ***Increase productivity***

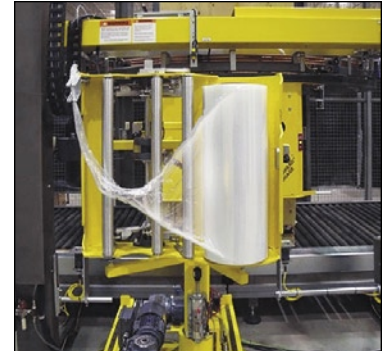

Additional space required (including safety fence): 78" W x 43" L x 63" H

Auto Roll Changer

ITW Muller's Auto Roll Changer, designed for Octopus rotary ring stretch wrappers, increases productivity and helps to eliminate the labor associated with manual film roll changeovers. Its innovative design automatically replaces the depleted or broken film with a new roll, minimizing operator intervention and production interruptions. Changing film no longer requires waiting for the operator to respond or working in the confined wrap zone.

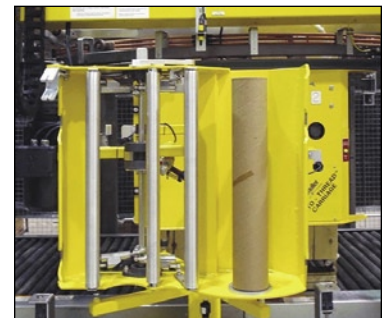

The Auto Roll Changer is available as an option on all new or as a retrofit on most existing Octopus machines.

Auto Roll Changer, with new roll of film, in home position.

Auto Roll Changer enters wrap zone, removes depleted film and rotates new film into position.

With the new film roll in ready position, the Auto Roll Changer returns to its home position. Wrapping resumes and film can be replenished at the operator's convenience.
