# **BladeBoard™**

## **Void Board**

**B**ladeBoard improves the overall quality of brick loads by maintaining void integrity and providing cube stability throughout the shipping and handling process. BladeBoard comes standard in 5" widths and is designed to be cut-to-length to accommodate varied cube sizes. This innovative offering allows for less inventory of multiple board sizes, keeping transportation costs and storage space to a minimum.

### **Minimize production interruptions**

Unlike wood veneers and plastic corrugated sheets, BladeBoard doesn't stick together or drop off during placement, eliminating product waste and production downtime. Additionally, BladeBoard's reduced thickness and dimensional consistency requires 20% less space when stacked, increasing the magazine holding capacity to save time and money on the reloading process.

### **Reduce waste**

BladeBoard, composed of recycled plastic materials, doesn't warp when exposed to the elements, eliminating waste associated with wood veneer boards. It also prevents the mold and mildew staining on lighter colored bricks. Made from recycled content with the potential to be reused, BladeBoard void boards support the sustainability standards endorsed by the building and construction industry.

*At Signode, we are committed to protecting our natural resources while helping your business grow. We manufacture BladeBoard™ from 100% recyclable materials and it's 100% recyclable. Our manufacturing processes are also designed to minimize waste, pollution and energy consumption. When you buy BladeBoard, you'll get a product to improve your brick loads that can also help fulfill sustainability initiatives.*
