

GaleWrap™

Oriented Stretch Film & Oriented Stretch Equipment

- *Costs less*
- *Easier to use*
- *Stays tight*

GaleWrap™

SPECIFICATIONS

Unlike other prestretched films, GaleWrap™ oriented film is manufactured using a specialized, patented process that makes it easier to apply than conventional films. The result is a stretch film that produces high performance results, but requires minimal operator effort during manual application.

GaleWrap couples the high strength properties of machine-grade film with the benefits of hand applied film, creating an ideal stretch film for both manual and automated stretch film applications.

Lowers pallet wrapping costs

When compared to lower priced conventional films, GaleWrap offers a higher quality stretch film at the same low price.

Increases wrapping productivity

With a neck down of only 5-7%, GaleWrap ensures minimal width reduction, enabling you to wrap loads faster with less film.

Post-wrap contraction improves load containment

GaleWrap continues to contract after application, holding loads tight during shipping and handling.

Reduces waste

GaleWrap's patented manufacturing process hems the edges of the film, allowing the roll to completely unwind, which eliminates the waste associated with "barber-poling" rolls. We guarantee that you will use the entire roll or we'll credit 110% of your purchase price.

Product Listing

GaleWrap™ Oriented Hand Film

Roll Width	Roll Length	Package	Rolls per Pallet
18 Inches	1500 Feet	Boxed	144
	1500 Feet	Bulk	128
	2000 Feet	Bulk	108
15 Inches	1500 Feet	Boxed	192
	1500 Feet	Bulk	192
	2000 Feet	Bulk	162
12 Inches	1500 Feet	Boxed	192

GW1000 GaleWrap SV Pallet Wrapper

GaleWrap's semiautomatic pallet wrapper automates hand wrapping, providing greater production efficiency than manual film application. The GW1000 features a maximum weight capacity of 3000 lbs and operates at up to 8 RPM.

- Maximum load height 80"
- Roping device available to secure loads even tighter
- Works best with Galewrap 6000' "SV" Oriented Film
