Liners are made with
food-grade materials

Easy to Install

Our special hanging
system provides fast
liner installation

Less Waste

Eliminates the need
for pallets or bags

Food-grade container liners

Manufactured from virgin polyethylene, Caretex® food-grade container liners have helped transport dry bulk products like petrochemicals, minerals, and grains for over 30 years. Cost-effective and easy-to-use, Caretex food-grade container liners eliminate the need for additional packing materials, thereby helping to streamline operations.

Features and benefits

■ Food grade quality

Caretex food-grade container liners are made with contaminate-free PE film that is FDA approved in accordance with ISO 22000:2005, GMP and HACCP. They consist of layers of co-extruded PE film and a mixture of LLDPE and LDPE. Our patented inflatable discharge airbags and spout constitute a true closed contamination free unloading system.

■ Fast installation

Our easy-to-use hanging system makes it possible to install liners in less than 30 minutes and allows more commodities to be loaded into the container. This results in time and labor savings due to efficient installation, loading, and discharge processes.

■ Packing components

Caretex food-grade container liners provide shippers with logistic and economic advantages by eliminating the need for additional packing materials such as pallets, bags and reducing warehouse space requirements.

Liner Options

- PE 1012 Premium Airbag Liner

- PE 1012 Zipper Loading Liner

- PE 1012 Full Access Liner

- PE 1016 Fluidizing Jet Flow Liner
