

Load Securement

Safety Sheets

Transit load securement sheets

Reduces damage

The safety sheet secures the cargo easily and firmly, preventing cargo from falling out.

Sustainable solutions

Decrease packaging waste and providing recyclable options.

Enhanced productivity

Maximizing packaging and material handling processes.

Simple to use

Quick and easy to install by one person within 2 minutes.

SAFETY SHEETS

Transit load securement sheets

Load securement from the back of the container to support holding the transit load in place.

Safety sheets support unstable and not well secured cargo by adding an additional layer of protection, when the doors are opened. This lowers the likelihood of cargo being damaged and improves safety during container door opening.

Break strength tests show results between 5.8 and 6.6 kN break strength for the safety sheets.

Technical Specifications

Specification	Value
Material Used	210gr/m2 Woven PP
Dimensions (cm)	210 (W) x 180 (H)
Weight per Sheet (kg)	2
Delivery Mechanism	100 pcs per pallet
