

Edge Protection

Reduce damages

Increased product edge protection.

Cost effective

Easy to apply.

Optimise strapping

Improves tension transmission of strapping.

Sustainable

Uses 100% recycled and recyclable materials.

STRAP EDGE PROTECTORS

Edge protection

Angleboard® strap edge protectors reduce tension transmission of strapping and increase product edge protection from strapping damage.

Strap edge protectors are made of multiple plies of recycled paper laminated together and formed into a right angle. The protectors are cut to length for both hand and machine application. Strap protectors improve tension transmission of strapping and afford product edge protection from strapping damage. Strap edge protectors come in machine-grades, flat edge and edge protection to guard products.

Options

■ Standard edge protection

Pre-formed, laminated paper edge protectors improve tension transmission of strapping and afford product edge protection from strapping damage.

■ Machine grade protection

Precisely cut to be applied by a strapping machine, pre-formed, laminated paper edge protectors allow for high strapping tension protecting your pallet from strapping damage.

■ Moisture resistance

Litec and Tchipgard variants available; designed for maximal moisture resistance.

■ Variation of choices

Strap protectors come in a variety of sizes and strengths.
