

Protective Packaging

Custom designed

Reduces Raw Materials

Uses the latest technology to develop customized packaging that minimizes waste

Quick Turnaround

3-5 day production time on most orders

Unlimited Flexibility

Technology that provides endless packaging possibilities for variable product lines and industries

Reliable Packaging

Minimizes the occurrence of damaged or returned goods

Protective Packaging

Custom designed protective packaging

PDM solves packaging challenges with a unique, custom design that meets your protective packaging needs with efficiency and affordability. With a number of substrates available for use, PDM's custom packaging protects products of essentially any shape, weight or size, providing protection throughout the transportation cycle. Additionally, PDM has the materials and design capabilities to protect products in essentially any industry including those with environmental or temperature restrictions like the cold chain shipping industry.

Features and benefits

■ Customizable designs

Experienced PDM engineers create electronic three-dimensional models of each product, allowing for simulations of packaging designs that are suited to each specific product. Unlike traditional packaging methods, this fine-tuned customization allows for the best possible design, while minimizing excess materials.

■ Sustainable products

Custom designed packaging solutions utilize as few materials as possible in the manufacturing process, while making sure that each product is provided with maximum protection. Most designs can be reused multiple times, reducing material input and packaging costs. Plus, PDM incorporates environmentally-friendly materials into their manufacturing processes to further enhance packaging sustainability.

■ Quick turnaround

PDM supports today's demand for lean manufacturing with flexible quantities and fast production responses. With over 30 molding systems, PDM accommodates regular orders and spikes in production with an average 3-5 day lead time.

Product offerings

■ Premolded Polyurethane Foam Dunnage

■ Expanded Polypropylene

EPP Custom Pack

EPP Coin Tray

■ Expanded Polystyrene Protective Packaging

Handling Tray

EPS Assembly Unit

■ Protective Foam Inserts

PE Profile

Automotive Electronic
Polyethylene Endcap
