

Reliability Services

Performance Analysis Programs

Streamline Operation

Optimize equipment performance to increase productivity

Minimize Interruptions

Proactive maintenance helps to reduce downtime

Equipment Longevity

Preventative maintenance measures ensure long-lasting operation

Qualified Technicians

Highly trained service personnel with years of industry and equipment experience

Reliability Services

Performance Analysis Programs

Signode's Reliability Services group provides the inspection and maintenance of end-of-line packaging equipment to optimize performance and minimize unscheduled production interruptions. Our Performance Analysis Programs keep Signode equipment operating to its full potential, improving operation, increasing efficiency and reducing downtime.

Features and benefits

Comprehensive analysis and report

The Performance Analysis Program begins with an on-site equipment evaluation. Signode technicians generate a Performance Analysis Report (PAR). With over 90 critical checkpoints that impact machine operation and uptime, the PAR includes an overall assessment of the structural, mechanical and electrical integrity of the equipment, including the scope of maintenance, identifiable correction areas as well as observed damage and wear. Once the complete report is reviewed and approved by the customer, the Signode technician can perform basic maintenance and repair as well as determine what is required to bring the equipment to optimal performance using the latest resources and genuine parts.

Meets customer needs

The Reliability Services group offers two different plan options to meet customer needs. The Performance Analysis service addresses minor maintenance concerns and identifies optimization opportunities to keep equipment operating at peak utilization.

With the Performance Analysis Plus service, a Signode technician also creates preventative maintenance schedules based on their findings and subsequently trains the maintenance team to keep equipment performance optimized. They provide maintenance guidelines as well as specifics on installations, repairs and parts replacement, helping sustain the value and dependability of Signode equipment.

Highly trained service technicians

Signode's technicians have extensive equipment and packaging industry understanding along with direct factory training. This expertise coupled with years of experience enables them to optimize maintenance procedures, identify problems and resolve issues that may be contributing to machine productivity.

Available for all types of packaging equipment

- Special application strapping equipment
- General purpose strapping equipment
- Stretch wrapping equipment
- Stretch hood equipment
- Case erectors / case sealers
