COBRA® RA PT / MM / SM

Mobile Semi-Automatic Rotary Arm Stretch Wrapping Machines

Ease of Assembly

Easily assembled and
ready to wrap in under one
hour

Maximum Mobility

Fully mobile and can be
easily transported to
specific wrapping areas by
pallet truck

Production Versatility

Effective wrapping solutions
for irregular loads

Intuitive Operation

Easy to understand
programmable operator
interface

COBRA RA-PT/MM/SM

Mobile Semi-Automatic Rotary Arm Stretch Wrapping Machines

The Cobra RA mobile series of rotary arm stretch wrappers are designed for wrapping of heavy, unstable, irregular loads. Unlike turntable wrappers, which rotate the load, our rotary arm wrappers feature a rotating arm that moves around the stationary load. This configuration allows for greater flexibility in wrapping irregularly shaped or fragile items and minimizes the risk of load instability during the wrapping process. The wrappers do not require firm fixation to the floor.

The range of models includes everything from stand-alone wrappers, to wrappers with a FLT installed, and wrappers that can be moved around with a pallet jack allowing for the wrappers to be easily moved next to the load for wrapping versus having every load brought to the wrappers.

The Cobra RA mobile machines use oriented stretch wrap film also available from Signode. The mechanical properties of our oriented core-less films combined with customized wrapping patterns allow for a consistent load containment and the necessary pallet stability during transport.

Features and benefits

■ On Spot Wrapping

Main benefit of the Cobra RA mobile machines is the ability to be moved to the desired wrapping locations. No need to transport possible unstable loads to the wrapper.

■ Dual Power Source

No need for an electricity power source next to the machines. They can also be powered by a rechargeable long life battery (capacity of up to 250 pallets per charge, based on 10 revolutions per pallet). The Cobra RA-MM is powered via the forklift truck as it has no battery solution.

■ Programmable Wrap Patterns

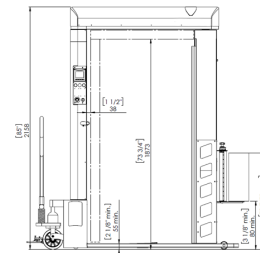

Four individual wrapping programs can be stored to meet the demands of the most demanding applications.

■ Pallet Versatility

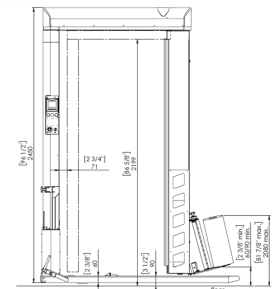

Depending on the model, you can wrap pallets as high as 2.4m (94.4") allowing for better utilization of transport space in the distribution chain.
