

## Sealed Container Liners

### Recyclable Liners

Manufactured with  
single substrate

### Cost Efficient

Optimizes  
shipping costs

### Easy to Install

Special system provides  
faster installation

### Less Waste

Eliminates the need  
for pallets or bags

# Sealed Container Liners

Manufactured from virgin materials, our Sealed Container Liners are built to transport dry bulk products like petrochemicals, minerals, grains, powders etc..

Our Liners are Cost-effective and easy-to-use, helping eliminate the need for additional packing materials, thereby helping to streamline operations.

## Features and Benefits:

### ▪ **100% Recyclable**

Made of single material making it easier to recycle, without contributing to the landfill.

### ▪ **Fast installation**

Our easy-to-use hanging system makes it possible to install liners in less than 10 minutes and allows more commodities to be loaded into the container. This results in time and labor savings due to efficient installation, loading, and discharge processes.

### ▪ **Packing components**

Sealed container liners provide shippers with logistic and economic advantages by eliminating the need for additional packing materials such as pallets, bags and reducing warehouse space requirements.

### ▪ **Reduced SKU's**

With our range of Sealed Liners, you can now ship wide range of materials like Powders and Granules in same liner, lowering SKU requirements.

### ▪ **Reduced Contamination**

As there is no work performed inside the liner, this eliminates contamination risk during manufacturing too; additionally these liners eliminate stitching, PU Tape, stitching thread.

### ▪ **Higher Joint Strength**

The sealing technology provides for a joint strength up to 700 N; significantly higher than the conventional stitched woven liners.

### ▪ **Low weight liner**

These Sealed liners are approx 8% lower in weight, allowing for more liners per shipment; lowering the shipping costs per Liner.
